I do not support HR4026. As a truck driver I do not have time to search through all the local channels in hopes of finding the road construction, wrecks, etc. that may be ahead of me. If I am to help alleviate traffic congestion, I have to know before I get there!!

The normal AM & FM stations in metro areas do not give continuous detailed information on traffic & weather. This is a service that I am paying for and the broadcast community has no right to tell me that I can't have it.
